

Commissioner Peter Bradford
NUCLEAR REGULATORY COMMISSION
1717 H Street, N.W.
Washington, D.C. 20555

October 16, 1981

Dear Commissioner,

I strongly urge you to convince your fellow commissioners of the danger of activating Diablo Canyon on an earthquake fault, and now with insufficient support designs the insanity of this facility is amplified even further.

When does the NRC plan to indicate that it really is a regulator instead of a promoter of nuclear power?

When do you plan to make history by finally rejecting FOR THE FIRST TIME a license for a nuclear power plant?

And while you're awakening to the real danger to human beings in California by saying NO! to Diablo, please also shut down Rancho Seco and keep it terminated.

As you know, Rancho Seco is a twin to Three Mile Island. There still is nothing to prevent another hydrogen bubble and there still is no measuring device to even indicate whether or not water is surrounding the core!

Please save our lives and those of our children and their offspring. Right now we only have one planet, one environment. If it becomes radioactive, we lose it for virtually forever.

Sincerely,

Jay Newbern
