Gentlemen:

Subject: Pilot Study for HPCI Design Basis Document
Cooper Nuclear Station
NRC Docket No. 50-298, DPR-46

Reference: Letter G. A. Trevors to NRC dated November 25, 1987, "Response to Inspection Report No. 50-298/87-10"

In Section III of the reference, Nebraska Public Power District outlined a plan for the production of an original pilot design basis document on the High Pressure Coolant Injection (HPCI) system. At the time the best estimate for completion was May 31, 1988. In spite of the District's efforts the pilot document was not completed until the end of July 1988. A schedule for establishing the remaining design bases for Cooper Nuclear Station is progressing.

If you have any questions regarding this letter, please contact me.

Sincerely,

G. A. Trevors for
