Gentlemen:

VIRGINIA ELECTRIC AND POWER COMPANY
NORTH ANNA POWER STATION UNITS 1 AND 2
RESPONSE TO NRC REQUEST FOR Q-LIST
COMPLETION AND IMPLEMENTATION SCHEDULE

NRC letter dated March 4, 1988 stated that Virginia Electric and Power Company's responses to NRC Generic Letter 83-28, Item 2.2.1, "Equipment Classification Programs for All Safety-Related Components," are acceptable and that Item 2.2.1 is completed for the North Anna Power Station Units 1 and 2. The March 4, 1988 NRC letter also cited our commitment to develop a new and more complete listing of safety-related components (Q-List) and requested that a schedule for the completion and implementation of this new listing be provided to the NRC by May 3, 1988. This letter provides the requested information.

Our letter of July 26, 1985 (Serial No. 85-063A) provided our estimated date for completion of the new Q-List as the end of the second quarter of 1987. The new Q-List was in fact completed and distributed to the North Anna Power Station on June 30, 1987. After a review and trial use period by Station personnel, the new Q-List was approved by the Station Nuclear Safety and Operating Committee and implemented on November 25, 1987. As part of the implementation of the new Q-List, some of the procedures and practices described in our original responses to Item 2.2.1 have been modified or replaced as necessary to accommodate the new listing. However, key elements and controls described in our previous responses have been maintained. The Q-List is continually being validated and updated as we use it.

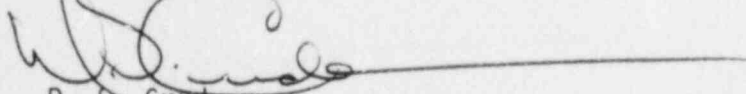

In addition, the Q-List has been computerized. This automation will tie the Q-List in with the Work Planning and Tracking System. This will aid the planners in determining whether a piece of equipment is safety-related. The computerized listing will have to be validated and procedures revised prior to full implementation.
