Special Report

This Special Report provides details for a measured structural settlement value outside of the limits of Technical Specification Table 3.7.10-1. Marker no. 34 was found at 0.85 inches, outside specified limits during the initial performance of Technical Specification Surveillance 4.7.10.a during June 1985. The surveillance was completed again on October 10, 1985 and January 9, 1986 and marker no. 34 was measured to be 0.84 and 0.91 inches respectively. The predicted value is 0.4 inches. The structural integrity has not been affected as discussed in FSAR Section 2.5.4.13.2.2, Page 2.5-129a. Therefore, the normal frequency of Technical Specification surveillance will remain in effect. A change to FSAR Table 2.5-19 and other appropriate documents will be made to revise the predicted settlement.
