RE: LICENSING OF DIABLO CANYON, San Luis Obispo, CA.

As an EDUCATED, CITIZEN OF MENDOCINO COUNTY (Northern Calif.), I am compelled to express my feelings. I have watched the growth of the nuclear industry with awe and horror, as I realized the "public NO-RETURN" which is being built. During the early growth years, the industry carefully fed the mass media with only those facts which would shed a positive light on their activities. I have diligently searched out all the facts and am appalled at what goes on within nuclear plants!

The major issue at stake is the contaminated waste products and their disposal. There is absolutely NO safe method of containment & storage (disposal) of nuclear by-products.

I strongly believe we can satisfy America's energy needs by development and implementation of solar and hydroelectric systems, coupled with concerted energy conservation by the people, as well as all industry.

Due to the unstable plant location, the ~~unsafe~~ unsafe plant design, as well as the above-stated arguments, I must ask you to abstain from signing the license for Diablo Canyon Nuclear Power Plant.

In peaceful respect,
Kim Buehner
