References: 1. Docket No. 50-285
2. Letter to NRC (Document Control Desk) from OPPD (K. J. Morris) dated July 25, 1988 (LIC-88-620)

Gentlemen:

Enclosed herewith is Omaha Public Power District's (OPPD) "Application for Amendment of Operating License" which seeks to amend the Fort Calhoun Station Technical Specifications to reflect changes which are necessary to support Cycle 12 operation. As has been discussed with Mr. Pat Milano, approval of these specifications is required before restart following the 1988 refueling outage. As part of OPPD's reload analysis program for assuring appropriate application of Combustion Engineering methodology, Combustion Engineering is concurrently reviewing this submittal. The concurrent review is being undertaken rather than a prior review due to time delays in completing the reload caused by the Cycle 11 setpoint analysis error response (Reference 2).

Also, attached is a check for \$150.00 to cover the application fee, pursuant to 10 CFR § 170.21.

Sincerely,

K. J. Morris
Division Manager
Nuclear Operations
