Reference: Docket No. 50-286

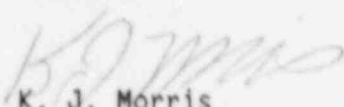

Gentlemen:

Enclosed is Omaha Public Power District's Request for Change to Basis of Fort Calhoun Station, Unit 1 Technical Specification Section 2.7, "Electrical Systems." This change is necessary based upon recently completed calculations performed to verify the adequacy of the onsite fuel oil storage capacity.

Pursuant to 10 CFR 50.36(n), the licensee is required to have Technical Specifications. Included is the requirement for a basis to each Technical Specification. Although required by regulation, the bases are specifically not a part of the Technical Specifications. As such, significant hazards considerations pursuant to 10 CFR 50.92 are not expressly required. However, to alleviate any potential for confusion on this matter, a significant hazards considerations discussion was completed and is attached.

Also attached, pursuant to 10 CFR 170.21, is a check for the application fee of \$150.00.

Sincerely,

K. J. Morris
Division Manager
Nuclear Operations
