Senior Vice President
Energy Supply
Arkansas Power & Light Company
Post Office Box 551
Little Rock, Arkansas 72203

Dear Mr. Griffin:

As part of the Commission's Maintenance and Surveillance Program, a site survey was conducted at Arkansas Nuclear One, Unit 2 (ANO-2) during the week of November 4, 1985 by a team of the NRC staff and consultants from Battelle Pacific Northwest Laboratory. The purpose of the survey was to collect information and observations about the ANO-2 maintenance and surveillance program. The results of the survey detailed in the enclosed report will assist the Commission in learning current maintenance practices in the nuclear industry and evaluating their effectiveness.

The report details information and observations in five main areas associated with the ANO-2 maintenance and surveillance program: organization and administration; facilities and equipment; technical procedures; personnel; and work control. In each of the five main areas, the team observed evidence of strong management support to improve maintenance related activities at ANO-2. Furthermore, the team believes that ANO-2 should have a strong maintenance and surveillance program if the licensee maintains management support in this area at the present level.

In closing, we would like to thank you for the cooperation and assistance provided to the team during the visit by members of your staff.

No specific response to this letter is required, however, if you have comments or questions concerning the enclosed report, please contact us.

Sincerely,

ORIGINAL SIGNED BY

Robert S. Lee, Project Manager
