

March 3, 1969

J. P. O'Reilly, Chief
Reactor Inspection and Enforcement Branch
Division of Compliance, Headquarters

PACIFIC GAS AND ELECTRIC COMPANY (DIABLO CANYON UNIT NO. 1)
DOCKET NO. 50-275

The attached report contains the details of a recent visit to the applicant's home offices in San Francisco, California on February 7, 1969.

You will note that actual construction efforts associated with the containment structure are currently planned to begin sometime during June, 1969. The applicant also plans to have a detailed "quality assurance-quality control" program formulated and ready for implementation at least a month prior to commencing construction of the containment structure. We plan to review the applicant's program in detail as soon as it becomes available (currently anticipated by May, 1969).

You will also note that the project administration responsible for constructing the plant conforms to that submitted in the applicant's application for a permit to construct Diablo Canyon Unit No. 2.

No particular problems have been evidenced as of this date. Our first site visit is scheduled for March 11, 1969.
