Operating License No. DPR-72
Diesel Generator Loading

Dear Sir:

Florida Power Corporation (FPC) provided additional information concerning diesel generator loading to the NRC in letter 3F0288-02 dated February 1, 1988. In this letter, a discussion was provided concerning combustion air temperatures as they relate to diesel generator ratings. The purpose of this letter is to confirm that FPC will be installing the HVAC modification previously described. However, once the modification is complete, FPC may choose to derate the diesel generator should a portion of the modification become inoperable (e.g., if one of the fans is out of service) and margin remain with regard to diesel generator load.

Should you have any questions please do not hesitate to contact this office.

Sincerely,
