PRAIRIE ISLAND NUCLEAR GENERATING PLANT
Docket Nos. 50-282 License Nos. DPR-42
50-306 DPR-60

Supplemental Information For
License Amendment Dated July 18, 1988
Elimination of Low Feedwater Trip
CONTAINING PROPRIETARY INFORMATION

Our License Amendment Request dated July 18, 1988, proposed the elimination of the low feedwater trip function. In that request we committed to provide the NRC Staff with a Westinghouse licensing topical report related to the advanced digital feedwater control system median signal selector feature which will be installed at Prairie Island. Attached are ten proprietary copies of that report, WCAP-11931, Advanced Digital Feedwater Control System Median Signal Selector For Northern States Power Prairie Island Units 1 and 2, and a non-proprietary version of the report (WCAP-11932).

As WCAP-11931 contains information proprietary to Westinghouse Electric Corporation, it is supported by an affidavit signed by Westinghouse, the owner of the information. The affidavit sets forth the basis on which the information may be withheld from public disclosure by the Commission and addresses with specificity the considerations listed in paragraph (b)(4) of Section 2.790 of the Commission's regulations.

Accordingly, it is respectfully requested that the information which is proprietary to Westinghouse be withheld from public disclosure in accordance with 10 CFR Section 2.790 of the Commission's regulations.
