att: Docketing and Service Branch
Washington, DC. 20555

To those concerned:

as a concerned citizen of New Hampshire, I am writing to ask that you reconsider the proposed rule change (re: 10 CFR Part 50) that would drop any need for an effective evacuation warning siren system before low power testing can take place at the Seabrook Plant. I am strongly opposed to such careless, political decision making. Safety should be #1 on priorities. Making short cuts for convenience sake, is not only taking risks, but, is irresponsible action.

Furthermore, I can't understand how licensing any nuclear power plant could possibly be justified without solutions regarding - waste, health hazards, the mining of uranium and its affects on the Indian, to mention only a few - are met.

Sincerely,
Donna Baker Hartwell
