

DOCKET NUMBER **PR 50** (17)
PROPOSED RULE
(53 FR 16435)
DOCKETED
USNRC 5/14/88

RE: (10 CFR ~~Part~~ MAY 23) P 6:34

TO the NRC:

OFFICE OF SECRETARY
DOCKETING & SERVICE
BRANCH

I can't believe you people,
now you want to change the
rules ^{again} to drop the required
warning siren system before low
power testing. You disregard
for the public's safety in favor
of the nuclear industry continues
to be appalling to me, and to
most people. How can you people
live with yourselves? Remember
Adolf Hitler?! I can't help but
draw a comparison. The building
of the Seabrook plant has been
lunacy from day one. It should

never have been located near such a densely populated area, but I suppose you people approved the site.

I'm sick and tired of watching the NRC trying to save the financial necks of the nuclear investors while sacrificing the public's safety. But that's the essence of a Republican's platform isn't it, "money before people". It's obvious that the NRC is pushing to get that plant turned on before Mr. Dukakis is elected, so the public will have to foot the bill and not the investors. Well, I'm going to continue to do every thing I can to keep that plant from ever operating as a nuclear plant. And let me say again that I think you people are derelict in your duty, as I'm sure you know you are, and are simply disgusting!
