March 12, 1986

Director of Nuclear Reactor Regulation  
United States Nuclear Regulatory Commission  
7920 Norfolk Avenue  
Bethesda, Maryland 20814

Attention: Ms. Elinor Adensam, Director  
Project Directorate 3  
Division of BWR Licensing

Dear Ms. Adensam:

WORK CONTROL COORDINATION  
HOPE CREEK GENERATING STATION  
DOCKET NO. 50-354

As referenced in a letter from C.A. McNeill (PSE&G) to E. Adensam (NRC) dated November 29, 1985 and discussed during the meeting of January 17, 1986 between Public Service Electric and Gas Company (PSE&G) and the NRC, PSE&G hereby submits the following description of the Hope Creek Work Control Coordination Procedure.

The Work Control Coordination Procedure describes the control process for the coordination of work activities between implementing work organizations and the on duty operating shift. The procedure shall be in effect commencing at fuel load. The scope of the work activities shall include corrective work orders and Design Change Packages (DCP's) being implemented on turned over systems and work orders written by the Startup Department for work activities on deferred systems still undergoing Preoperational Testing. The above activities will be coordinated by a separate group, the Work Control Coordination Group (WCCG), which augments the station planning and scheduling organization. The WCCG shall provide support to process Safety Tagging Requests, Hot Work Authorizations, Fire System Impairments and Scaffolding Permits by providing continuous interface on these items between the implementing departments and the on duty Senior Nuclear Shift Supervisor.
