Little Rock, Arkansas 72203

Gentlemen:

To verify that licensees have completed their emergency response facilities (ERF's) and have met the related requirements in Supplement 1 to NUREG-0737, the NRC is conducting a special appraisal at all operating nuclear power reactors. The objectives of these appraisals are to determine that the ERF's are capable of performing those functions needed to assist licensees in taking adequate protective measures in the event of a radiological emergency and to assure that the requirements in Supplement 1 to NUREG-0737 have been satisfied. We will use the findings from these appraisals as a basis not only for requesting individual licensee action to correct deficiencies, but also for effecting improvements in NRC requirements and guidance.

During the period May 20 through 24, 1985, the NRC conducted a special appraisal of the ERF's at Arkansas Nuclear One Units 1 and 2. Areas examined during this appraisal have been described in the enclosed report (50-313/85-11 and 50-368/85-11). Within these areas, the appraisal team reviewed selected procedures and records, inspected the facilities and equipment/supplies, observed simulated use of equipment and supplies and interviewed personnel. The findings of this Emergency Response Facilities Appraisal identified one unresolved item, which has been resolved by the NRC and five deficiencies in your emergency preparedness program. It is requested that you provide this office with a schedule for correcting these deficiencies 30 days after receipt of this letter.

Within the scope of the inspection, no violations or deviations were identified.

We apologize for any inconvenience that may have been caused by late issuance of this report. Should you have any questions concerning this inspection, we will be pleased to discuss them with you.

Sincerely,

\*Original Signed by
