Areas examined during the inspection included followup on previously identified items, licensee event report followup, operational safety verification, plant tours, safety-related system walkdown, monthly maintenance observations, monthly surveillance observations, security observations, radiological protection observations, in-office review of periodic and special reports, followup on the licensee's program for sampling the emergency diesel generator fuel oil supplies, followup on NUREG-0737 (TMI) Item II.K.3.5 concerning tripping of reactor coolant pumps after a loss-of-coolant accident and followup on the potential for inadvertent dilution of the reactor coolant system via the sodium hydroxide tank. Within these areas, the inspection consisted of selective examination of procedures and representative records, interviews with personnel, and observations by the NRC inspectors. The inspection findings are documented in the enclosed inspection report.
