DOCKET NOS. 50-445 AND 50-446

AMBIENT TEMPERATURE EFFECTS ON MSIV ACTUATORS

SDAR: CP-87-19 (SUPPLEMENTAL REPORT)

Gentlemen:

On January 18, 1988, we notified you via our final report TXX-88104 of a deficiency involving the ambient temperature effects on Main Steam Isolation Valve (MSIV) actuators. This is a supplemental report to status the corrective actions implemented to date.

The Unit 2 MSIV actuators were sent to Rockwell International for repairs and have now been returned to CPSES and installed in Unit 1, in accordance with TXX-88104. However Unit 2 corrective action as stated in TXX-88104 has been revised in that the Unit 1 actuators will be reworked on site rather than in the vendor's shop prior to installation on the Unit 2 MSIVs. The anticipated completion gate for the Unit 2 activities (January 1, 1989) has not changed.

Very truly yours,

W.C. Counsil

W. G. Counsil
