OFFICE OF SECRETARY
DOCKETING & SERVICE
BRANCH

I am very much in favor of the NRC interpretation of the emergency planning requirement for low power testing.

Nuclear plants have been in existence for over 30 years and we have over a hundred in the U.S. Their record for safety is excellent.

Now that we are facing a shortage of power, certain political factions are trying to hold us hostage to their way of thinking.

Please lets forget politics and have common sense prevail. Thank you

Concerned I am Thomas Lucas

DOCKET NUMBER
PROPOSED RULE
(53 FR 16435)

PR 50

May 31, 1988

Dear Sir,

DOCKETED
USNRC

Yes!, I am in favor of the
N.R.C. proposal <sup>OFFICE OF SECRETARY
DOCKETING & SERVICE
BRANCH</sup> clarifying the emergency planning
requirements.

I have had discussions with
several of our groups and we felt
that the need for Seabrook to
go on "line" is very important
if we plan to continue to live
the life style we've been
accustomed to with all the
appliances that we depend on
and say we "can't" do without.

The "brown outs" will be occurring
so we must act soon.

Hoping for a favorable decision
by the N.R.C., I am

Eileen R Lucas
