Secretary of the Commission
Att. Docketing and Service Branch
U S Nuclear Regulatory Commission
Washington D C. 20555

Gentlemen:

I want to compliment the Commission on the proposed new rules allowing test to be made with ir without sirens in place.

It appears to me that the most important thing is to get this Seabrook plant on line. I am sorry to say that the local politicians are more interested in their own political future than the need for additional power in this area.

Maybe if some of them were without electricity for a week they might change their tune because their constituents would ceratinly sing a new so ng to them/

I am happy to see that the Nuclear Regularatory Commission is doing all possible to get Seabrook on line and the Yankee plant in Flymouth Mass as well/

Keep up the good work, More Power to you

Sincerely yours

F. W. Holbrow
