The US Nuclear Regulatory Commission
Washington, DC 20555
Attention: Docketing and Service Branch

OFFICE OF REGULATORY
DOCKETING & SERVICE
BRANCH

I urge you to adopt modified regulations resolving the impasse on Seabrook's emergency evacuation, which would allow for plans to be set up and approved without state cooperation. This is necessary to prevent the irresponsible blocking of this ready to open + safely built plant by Massachusetts. You have this responsibility and are authorized to carry out the technical

PDR PR
50 53FR16435 PDR

evaluations of the plant and its
safe operations. It is totally unacceptable
that actions taken by Massachusetts —
including the incredibly irresponsible actions
of ordering sirens taken down —
block the opening of this safe + needed
source of electricity.

We are threatened by shortages
of electricity which could bring the
economy to a halt + yet Seabrook
sits unopened, sapping the financial
strength of companies + their customers
and you the NRC seem powerless

to stop it - yet it must
be stopped + the plant must
be opened or you will be sharing
in the irresponsibility along with
the Massachusetts authorities.

Please take appropriate action
to either force cooperation or run
the evacuation plans without cooperation
so that we can end this useless
waste and open the plant.

Thank You

John F. Malley.
