Mr. Harold R. Denton, Director
Office of Nuclear Reactor Regulation
U.S. Nuclear Regulatory Commission
Washington, DC 20555

Subject: LaSalle County Station Units 1 and 2
Revision to Proposed Technical
Specification Amendments - CRD System
Scram Accumulator Alarm
NRC Docket Nos. 50-373 and 50-374

Reference (a): Letter from H. L. Massin to H. R. Denton
dated August 2, 1985.

Dear Mr. Denton:

In reference (a), Commonwealth Edison proposed amendments to Appendix A, the Technical Specifications, for Facility Operating License NPF-11 and NPF-18 for LaSalle Units 1 and 2, respectively. The proposed amendments involved:

- (1) Removal of the upper limit on Control Rod Drive (CRD) accumulator pressure setpoint.
- (2) Addition of provisions to allow continued operation with CRD accumulator level or pressure monitors inoperable.

In response to concerns raised by members of your staff, we are modifying our proposed amendments to delete item 2 above. The attachment to this letter contains the remaining proposed amendment regarding the CRD accumulator pressure setpoint and supercedes the proposed amendment contained in Attachment B to the reference.

Since this revised submittal deletes a portion of our earlier request and therefore represents a more conservative action, our previous conclusion the No Significant Hazards Consideration exists remains applicable.

Commonwealth Edison is notifying the State of Illinois of our revised request by transmitting a copy of this letter and its attachment to the designated State Official.

Please direct any questions you may have concerning this matter to this office.

Three (3) signed originals and thirty seven (37) copies of this transmittal and its attachment are provided for your use.

Very truly yours,

J. R. Wojnarowski
Nuclear Licensing Administrator
