Dear Top Banana:

Get that New Hampshire Plant "Seabrook" going. We need the power; even today the temp is in the 90's and we are having elect problems TV flickering, air conditioners not going right, due to low power; etc. The politicians & their cohorts will get the blame for this but will always blame others. Govt masters are trying to keep progress from expanding due to their inept handling; after giving the go ahead to develop those plants. Please give a low power permit to operate Seabrook to make sure it is "safe to operate" & expand in the future when we will need the full power.

Yours truly

Mr & Mrs Steve Trz family
