Trojan Nuclear Plant  
Docket 50-344  
License NPF-1

U.S. Nuclear Regulatory Commission  
ATTN: Document Control Desk  
Washington DC 20555

Dear Sir:

TROJAN NUCLEAR PLANT

Data from the Pressurizer Surge Line (PSL) Monitoring Program

During the heatup following the 1988 refueling outage, data were taken on the pressurizer surge line to determine the extent of general stratification in the line and its effect on the movement of the line. The data are provided as an enclosure which includes a summary report of the monitoring program.

This transmittal represents the heatup and power operation portions of the monitoring program. Additional monitoring will be done during a future Plant cooldown.

Sincerely,

Enclosure
