Secretary of the Commission
Attn: Docketing and Service Branch
U.S. Nuclear Regulatory Commission
Washington, D.C. 20555

Dear Sirs:

I am totally in agreement with your new rule that off-site emergency licenses need not be in place that low-power testing poses no threat to the public outside the plant.

This is a sensible rule and important to New England's energy supply situation.

If the opponents to Seabrook Station allow and support removal of emergency learning licenses then I guess they have made this decision with full knowledge of the consequences.

I feel that "clarification of emergency planning requirements for low-power licenses" be expedited.

I would not want to deny anyone the right to express themselves, however many of the opponents to Seabrook are not even taxpayers and I suspect are not in fact from this area and if it were not Seabrook Station, they would have another cause.

As I have stated previously, it is time to throw the switch and generate electricity.

Very Truly Yours
Stanton G. Remick
