Reference: Vogtle Electric Generating Plant - Unit 2; 50-425
Valves Installed Opposite to Direction of Flow
GPC Letter GN-1466 sent 6/29/88

In the referenced letter, Georgia Power Company notified the NRC of a potentially reportable condition involving certain Unit 2 valves which were installed opposite to the direction of flow. Our evaluation of this issue is not yet complete. Due to the necessity of additional preparation time, the final report on this issue is now scheduled to be submitted on October 20, 1988.

This correspondence contains no proprietary information and may be placed in the NRC Public Document Room.
