Perry Nuclear Power Plant
Docket No. 50-440

Subject: Supplemental Revision to "License Amendment Request Pursuant to
10CFR50.90: Proposed Revision of Technical Specification 5.2.2.e,
Organization -Unit Staff,"

Ladies and Gentlemen:

In a letter (PY-CEI/NRR-2207L) dated September 8, 1997, the Perry Nuclear Power Plant Staff submitted a request to revise the requirements associated with the limits and controls of working hours for unit staff who perform safety-related functions (Reference: 1). During discussions supporting the NRC review of this request, it was determined that two additional paragraphs should be added to Technical Specification (TS) 5.2.2.e, "Organization - Unit Staff." Attachment 1 provides the annotated TS page reflecting the proposed changes. The proposed paragraphs provided in Attachment 1 are consistent with the content of NUREG-1434, "Standard Technical Specifications, General Electric Plants, BWR/6." These paragraphs neither modify the discussion and evaluation of the proposed Technical Specification change nor impact the Significant Hazards Evaluation provided in the original submittal. Therefore, the discussion and evaluation and Significant Hazards Evaluation provided still applies to the proposed changes in Attachment 1.
