Secretary of the Commission,
Docketing & Service Branch,
US Nuclear Regulatory Commission,
Washington, DC 20555

Dear Mr. Secretary:

As a very small specialty manufacturer in our field, we wish to point out that our needs never exceeded \$500.00 for electricity in a given calendar year, we are now using almost \$2500.00 per year and climbing. We know there are hundreds more of our size all growing in the New England area and we have to be sure of an adequate and RELIABLE supply. One not interrupted by foreign governments, both friendly and some otherwise. We must not rely on others to make our electricity and ship it in or place our faith in foreign oil wells etc. Electrical supply must be in our hands and subject to no whims of others.

For some years now we have followed the endless saga of zealots trying their best to delay, put off, even deny the right of Seabrook Station to take its place among all the other wonderful efficient safe nuclear plants in the Northeast on which so many of us depend, for homes and business. Certainly the people we talk with are for getting Seabrook on line which means starting the test runs soon in a timely fashion.

Public Service of NH has always been a fine utility that has served this area well in years past and people have placed their faith in it over a great many years. PSNH had the sirens all pole mounted long ago when lo and behold the detractors schemed to get them taken down. Now the supreme court of NH has ruled this was unlawful to make PSNH remove the sirens. It is our feeling that a nice big invoice should be sent those towns to pay for the replacing of the sirens and all related costs pertaining thereto.

Very truly yours,

Lloyd C. Greene, Jr.
