

LONG ISLAND LIGHTING COMPANY

Operating License NPF-36
Docket 50-322
License Change Application #14

This License Change Application requests modification to Operating License NPF-36 for the Shoreham Nuclear Power Station

1. To incorporate changes in accordance with the guidance provided by Generic Letter 88-06
2. To achieve consistency within licensing documents, and to reflect realignment of Corporate Management responsibilities and reporting requirements.

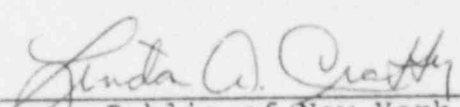

The requests and supporting documentation are contained in Attachments 1 and 2 respectively to this License Change Application.

Attachment 1

To License Change Application #14

1.0 Description of Change

In Technical Specification 6.0, delete figure 6.2.1-1, Corporate - Nuclear Organization, and figure 6.2.2-1, Unit Organization; revise sections 6.2.1 and 6.2.2 to include appropriate changes to the administrative control requirements to reflect the general requirements that capture the essential aspects of the LILCO/SNPS organizational structure.

2.0 Reason for Change

To incorporate changes that are consistent with the guidance provided by Generic Letter 88-06, Removal of Organization Charts From Technical Specification Administrative Control Requirements.

3.0 Basis for No Significant Hazards Finding

In addition to the basic criteria of 10 CFR 50.92(c) addressed below, this amendment request falls within the guidance provided by the Commission in Generic Letter 88-06 in that the staff has found that this change will not reduce plant safety. Specifically, this proposed amendment is an "administrative change" to technical specifications.

Based on the following reasoning, LILCO has determined that the proposed amendment does not involve a significant hazards consideration.

1. The proposed amendment does not involve a significant increase in the probability or consequences of an accident previously evaluated because deletion of the organization charts from the Technical Specifications does not affect plant operation. The NRC will continue to be informed of organizational changes through other required controls:
 - o 10 CFR 50.34(b)(6)(i) requires that the applicant's organizational structure be included in the Final Safety Analysis Report. Chapter 13 of the SNPS Final Safety Analysis Report provides a description of the LILCO/SNPS organization and detailed organization charts.
 - o As required by 10 CFR 50.71(e), LILCO submits annual updates to the FSAR.

- o Appendix B to 10 CFR 50 and 10 CFR 50.54(a)(3) govern changes to the organization described in LILCO's Quality Assurance Program.

LILCO is mindful that some organizational changes may require prior NRC approval. Also, it is LILCO's practice to inform the NRC of organizational changes affecting the nuclear facility prior to implementation. LILCO intends to continue this practice for future organizational changes.

2. The proposed amendment does not create the possibility of a new or different kind of accident from any accident previously evaluated because the proposed change is administrative in nature, and no physical alterations of plant configuration or changes to setpoints or operating parameters are proposed.
3. The proposed amendment does not involve a significant reduction in a margin of safety. Through the Company's strong Nuclear Quality Assurance Program and its commitment to maintain only qualified personnel in positions of responsibility, it is assured that safety functions performed by the nuclear organizations will continue to be performed at a high level of performance.

4.0 Timing of Change

Since this change is administrative in nature, LILCO requests that it become effective upon issuance.
