Mr. Thomas E. Murley, Director
Office of Nuclear Reactor Regulation
U.S. Nuclear Regulatory Commission
Washington, DC 20555

Subject: LaSalle County Station Unit 2
Environmental Qualification of
Bunker Ramo Containment Penetrations
NRC Docket No. 50-374

Reference (a): Letter dated May 13, 1988 from D.M.
Crutchfield

Dear Mr. Murley:

This letter is to formally request a meeting with your staff to discuss the environmental qualification issue related to the Bunker Ramo containment penetrations installed in LaSalle Unit 2. Commonwealth Edison (CECo) previously requested this meeting verbally but has been asked by the Licensing Project Manager to put this request in writing.

Contrary to the position stated in Reference (a), the documentation (test reports) used by CECo to support our position that these penetrations are qualified for LaSalle Unit 2 is not similar to that used for Braidwood 2. Specific test data were supplied for LaSalle which we believe meets requirements for a NUREG-0588, Category II plant. Resolution of this difference of opinion can best be resolved with a face to face meeting with your technical review staff.

If you have any further questions regarding this matter, please direct them to this office.

Very truly yours,

C. M. Allen
Nuclear Licensing Administrator
