NRC Docket Nos. 50-254, DPR-29, Unit One
NRC Docket Nos. 50-265, DPR 30, Unit Two

Enclosed is Licensee Event Report (LER) 254/98-023, Revision 00, for Quad Cities Nuclear Power Station.

This report is submitted in accordance with the requirements of the Code of Federal Regulations, Title 10, Part 50.73(a)(2)(v)(D). The licensee shall report any event or condition that alone could have prevented the fulfillment of the safety function of structures or systems that are needed to mitigate the consequences of an accident.

ComEd is committing to the following actions:

1. The installed Air Filtration Unit (AFU) flow indicating system will be evaluated for improvements necessary to improve operation by January 8, 1999. Issues to be evaluated are the current calibration frequency of the existing flow indicator, the use of an improved flow indication system and whether the installed flow indicator should be abandoned. 1/1
2. Operating and surveillance procedures, which involve operation of the AFU, will be revised by January 15, 1999, to require the AFU makeup airflow be verified by a pitot tube traverse, if it is suspected that the AFU inlet damper requires adjustment. Jerr
3. QCOS 5750-11, "Control Room Emergency Filtration System 18 Month Test," will be revised by January 15, 1999, to provide more detailed guidance for taking control room envelope differential pressure readings with absolute pressure indicators.

4. Appropriate Instrument Maintenance personnel will be trained on the operation of absolute pressure indicators. This training will be completed by August 15, 1999.

Any other actions described in the submittal represent intended or planned actions by ComEd. They are described for the NRC's information and are not regulatory commitments.

If there are any questions or comments concerning this letter, please refer them to Charles Peterson, Regulatory Assurance Manager at 309-654-2241, ext. 3609.

Sincerely,

Joel P. Dimmette, Jr.
