Hi Roberto,

Here are my responses:

1. No licensed radioactive materials will be used or stored at 814 Alumni Drive. This is now the location of the Environmental Health, Safety, and Risk Management office space where I will be working.
2. N/A
3. EHSRM was formerly located at 1855 Marika Road, Fairbanks, AK 99709. No licensed radioactive materials were used or stored in that location.

Sincerely,
Tracey

Dr. Martinson:

I am processing the attached letter received from you and have the following questions. Your answers will help me decide how to amend the license.

1. Will radioactive material be used and/or stored at the address 814 Alumni Drive, Fairbanks, AK? If the answer is yes, provide a diagram and the information described in Page B-6 (Facilities and Equipment) found in the attached NUREG-1556, Volume 11, Revision 1, licensing guidance for Broad Scope licensees.
2. If no radioactive materials will be stored and/or used at 814 Alumni Drive, Fairbanks, AK we will make the pertinent annotations in the file and the license for the inspectors to see.
3. Provide the physical address for the Environmental Health, Safety & Risk Management offices that were vacated. If radioactive materials were used

and/or stored at the previous address for the Environmental Health, Safety & Risk Management offices, then provide final status surveys (ambient radiation surveys and wipe tests) for the location vacated and request that this location be release for unrestricted use. If no radioactive materials were stored and/or used at the vacated location then state so and we will make the pertinent annotations in the file and the license for the inspectors to see.

Thank you for your cooperation.

Roberto J. Torres, M.S.
