RE: Docket IDNRC-2020-0101: No Generic Review for Unknown, Untested Nuclear Reactors

Dear ,

Dear Kenneth T. Erwin:

Dear Kenneth T. Erwin:

There must be only specific environmental impact statements on small-scale advance reactors, one specific report for each specific reactor. Have consideration for the public, at least for each community that you propose to have as part of its community one or more of such reactors.

First of all, small-scale advance nuclear reactors/ ANRs are no help to the environment. Their waste alone we don't really know how to manage for thousands of years to come. Environmentally sound renewables such as solar and wind are far better energy sources. Proven to this day.

Even more alarming, the NRC shouldn't give an easy environmental pass to reactors it doesn't have experience regulating them. Yes, the US had three ANRs but before the NRC was created. You'll have to do your difficult, intense, long-term homework to determine how, if at all possible, to manage safely ANRs.

But why waste time on ANRs when we know of clean renewable sources and research is being done on other clean renewables? Shut down all existing nuclear plants, forget about ANRs and shut down the NRC. Instead, let's create R&D jobs in the clean and renewable energies sector!

Sincerely,

Sincerely,
Kathleen Drury
