**Subject:** [External\_Sender] GEIS small scale advanced nuclear reactors

Hello,

I am writing in support of the U.S. Nuclear Regulatory Commission's proposal to produce a generic environmental impact statement (GEIS) for small-scale advanced nuclear reactors.

Hey, wind and solar produce electricity only a small percentage of the time, and we can't provide enough back-up to fill in, so they force us to use fossil fuels to fill the gaps. Also wind and solar require a huge amount of land, and making the materials to build them forces us to use a huge amount of fossil fuels. On the other hand, nuclear reactors use very little space and run nearly 24/7.

So let's invest in new generation nuclear reactors to make them safe and reduce their cost. The world has a huge amount of uranium and thorium, so let's get busy.
