Subject: Acceptance Review for the LACBWR License Transfer Order Extension
Date: Sunday, July 12, 2020 9:06:00 PM

Good morning Gerry,

I am providing you with an acceptance review / acknowledgement for the extension request related to the effectiveness of the La Crosse license transfer order, which was issued on September 24, 2019, and currently expires on September 24, 2020. As always, the acceptance review does not preclude the possibility of RAIs, but does confirm that we have a complete set of information to begin the detailed technical review (which in this case should be pretty straightforward). I will capture this email in ADAMS to document the acceptance review, and please let me know if you have questions or need anything additional regarding this action.

By letter dated June 24, 2020 (ML20188A228), *LaCrosseSolutions* submitted a request for an extension of the effectiveness of the U.S. Nuclear Regulatory Commission (NRC) Order of September 24, 2019, for six months beyond its current expiration date of September 24, 2020. The Order approved the transfer of Facility Operating License No. DPR-45, held by *LaCrosseSolutions, LLC*, for the La Crosse Boiling Water Reactor (LACBWR), to the Dairyland Power Cooperative, and approved a conforming amendment to be implemented upon the completion of decommissioning activities at the LACBWR site.

The purpose of this e-mail is to provide the results of the NRC staff's acceptance review of this request. The acceptance review was performed to determine if there is sufficient technical information in scope and depth to allow the NRC staff to complete its detailed technical review. The acceptance review is also intended to identify whether the application has any readily apparent information insufficiencies in its characterization of the regulatory requirements or the licensing basis of the plant.

The NRC staff has reviewed your application and concluded that it does provide technical information in sufficient detail to enable the NRC staff to start its detailed technical review and make an independent assessment regarding the acceptability of the proposed extension request in terms of regulatory requirements and the protection of public health and safety and the environment.

Given the lesser scope and depth of the acceptance review as compared to the detailed technical review, there may be instances in which issues that impact the NRC staff's ability to complete the detailed technical review are identified despite completion of an adequate acceptance review. If additional information is needed, you will be advised by separate correspondence.

If you have any questions, please contact me.
