ATTN: Mr. Jose A. Calvo, Director
Project Director, Region IV
Division of Reactor Projects
III, IV, V and Special Projects

SUBJECT: Arkansas Nuclear One - Unit 1
Docket No. 50-313
License No. DPR-51
AP&L Resubmittal of the Second
Ten-Year Inservice Testing
Program for ANO-1

Dear Mr. Calvo:

AP&L's updated Second Ten-Year Pump and Valve Inservice Testing (IST) Program for Arkansas Nuclear One - Unit 1 (ANO-1) is attached for your review. AP&L had originally submitted the IST Program in March of 1985 (1CAN038504). In November, 1987 a working meeting was held at the ANO-1 plant site between AP&L and the NRC to discuss the submittal and answer questions that arose during the review of the submittal. During the meeting, each question was discussed and a response/resolution obtained for all questions. Both the NRC and AP&L came away from the meeting with open items that required resolution to complete the response. Completion of the NRC's open items has been received by letter dated June 15, 1988 (1CAN068802). AP&L's completion of open items are contained in the updated IST Program Submittal.

AP&L is currently utilizing the Second Ten-Year IST Program for examinations being conducted this refueling. The eighth refueling outage (1R8) began on August 27, 1988 and is scheduled to be completed in early November.

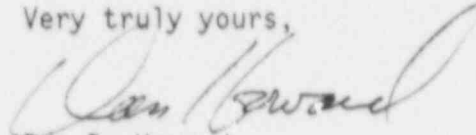

It is AP&L's understanding that the NRC staff is currently developing generic guidance for future IST examinations. Further, it is our understanding that our Second Ten-Year IST Program for the most part

complies with the positions being proposed by the NRC Staff. If the staff's positions are determined not to be justified as a result of reviews performed per 10 CFR 50.109, AP&L reserves the right to modify our program to be consistent with final industry guidance.

Very truly yours,

Dan R. Howard
Manager, Licensing
