FROM: Daniel R. Muller, Director  
Project Directorate III-2  
Division of Reactor Projects III-  
IV, V and Special Projects

SUBJECT: OSART VISIT TO BYRON STATION

Representatives of Consolidated Edison Company (CECo) and NRC met with Dr. Ferdinand Franzen (IAEA) to review plans for the OSART team visit to Byron Station. An attendance list is attached.

The following follow-up/action items were identified:

1. IAEA has not yet received the official invitation from the U.S. Government to participate in the visit. We agreed to check status. Action - IP.
2. On the first morning of the visit (May 15, 1989) a representative of NRC will be asked to brief the OSART team on the Regulatory environment at Byron Station. Need to identify the individual. Action - RIII/NRR/IP.
3. Press conferences will probably be held at the initiation and conclusion of the visit. Need to identify who, NRC or CECo, will have the lead for conducting the conference. Action - IP/NRR/RIII.
4. CECo is preparing a detailed agenda for the 3-week visit. We need a copy. Action - CECo (T. Maiman will provide).
5. Dr. M. Rosen, IAEA, is planning to visit H. Denton in the near future to establish protocol. Action - IP.
6. C. Reed will plan to visit Headquarters soon to discuss management of the visit. Action - RIII/NRR/IP.

In addition to the action items listed above, the participants covered the following:

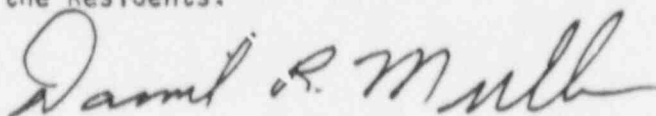

- Dr. Franzen visited the Byron site on October 24, 1988 to meet the staff, brief them on the purpose of the visit, and to work on logistics.
- The visit should not be considered an "inspection", rather it is viewed by IAEA as a "peer review" by others involved in similar activities. The team will consist of 10 to 12 representatives primarily of various

PNU

Def 11

European countries and will include one individual from USSR and one from Japan. The team will include plant managers, maintenance manager, operation manager, etc.

- On the first day of the visit, after preliminaries (security clearance, GET, whole body counts, etc) an introductory meeting will be conducted by Station staff. An NRC representative is invited to participate. See Action Item 2, above.
- On June 2, the last day of the visit, the Team will present Technical Notes to the CEC plant representatives. These are typically 60 - 80 pages of notes developed by the team members, and although subject to peer review by team members, they have not received significant editing or review by IAEA. As such, these Notes are not an official document and will not be widely distributed. It will not be provided to NRC; but will be available at the plant site for NRC review.
- The Official Report, a document of 25 - 30 pages in length will be prepared within one month of conclusion of the visit. This report will summarize the salient points of the visit. The report will be sent to CEC in draft form prior to finalizing for a check for gross errors. The final Official Report will be sent to NRC by IAEA. Courtesy copies will be provided to NRC and CEC. This report receives restricted distribution by IAEA. It is up to CEC and the U.S. Government to redistribute.
- Private meetings between NRC and OSART team representatives will be held every other day, or more frequently depending on need.
- IAEA discourages extensive observation by NRC personnel since it may inhibit the IAEA team member or inhibit free exchange of views by the plant staff.
- At some point during the visit, OSART Team representatives will wish to interview NRC staff. Depending on team wishes, it may involve people from RIII, NRC Headquarters, and/or the Residents.
