50-285/OL-85-SALP

MEMORANDUM FOR: L. Yandell, Fort Calhoun Station Resident Inspector  
FROM: R. Cooley, Chief, Operator Licensing Section  
SUBJECT: FORT CALHOUN STATION SALP INPUT ON OPERATOR LICENSING

Four Operator Licensing Examinations were administered during the SALP reporting period of September 1, 1983 to February 28, 1985. Five Reactor Operators were given initial and retake replacement examinations with three licenses being issued. Six Senior Reactor Operators were given initial and retake examinations with three licenses being issued. Requalification examinations were administered to two Reactor Operators and five Senior Reactor Operators. Two Reactor Operators and two Senior Reactor Operators passed the requalification examinations.

Fort Calhoun Station performance in all classes of examination has been marginal. However, after meeting with Region IV Staff, there has been a noticeable improvement to a commitment to improved training. The ADTECH programmatic review, procurement of additional training facilities, and the appointment of a new training supervisor reporting directly to the Plant Manager are all evidence of licensee intent to meet their commitment. For this SALP evaluation period, a rating of "Marginal but Improving" should be assigned to Fort Calhoun Station training performance.

If you need additional information concerning operator licensing activities at Fort Calhoun Station, contact S. McCrory (817-860-8265 or FTS 728-8265).
