SUBJECT: COMANCHE PEAK STEAM ELECTRIC STATION (CPSES)
DOCKET NOS. 50-445 AND 50-446
CABLE INSULATION RESISTANCE - LOOP ACCURACY
SDAR: CP-8-19 (SUPPLEMENTAL REPORT)

Gentlemen:

On January 29, 1988, TU Electric's report logged TXX-88143 notified you of a reportable deficiency involving the qualification of instrument cable insulation inside containment. Our last supplemental report was logged TXX-88614, dated August 10, 1988. This report is submitted to revise the corrective action implementation schedule.

TU Electric's engineering evaluation is continuing. Any required corrective actions for Unit 1 will be scheduled consistent with the associated system/area turnover dates, the latest of which is April 28, 1989. The schedule for Unit 2 has not changed.

Very truly yours,

W.G. Council
