*Subject: Mechanical Review Issues List - Revision 4  
Comanche Peak Steam Electric Station  
Independent Assessment Program - All Phases  
Job No. 84056*

Dear Mr. Council:

Please find enclosed Revision 4 of the Mechanical Review Issues List (RIL). All changes from Revision 3 are indicated by a revision bar in the right margin. Included in this revision is a new Review Issue No. 10, which deals with the component cooling water system butterfly valve at the outlet of the residual heat removal heat exchanger. This revision of the RIL reflects information that Cygna gained prior to and during their December, 1987 review.

Of the ten Mechanical Review Issues, two remain open as of the December, 1987 review date. These are Issue Nos. 1 and 4. Mechanical Review Issue No. 1 was further reviewed at Stone and Webster Engineering Company's Boston office the week of February 1, 1988. Mechanical Review Issue No. 4 was reviewed at the Comanche Peak site during the week of January 25, 1988. Information from these two reviews will be analyzed and the results included in Revision 5 of this RIL.

If you have any questions or require further information, please contact Cygna at your convenience.

Very truly yours,

*Nancy Williams/et*
