88 JUN 23 P1:54

OFFICE OF SECRETARY
DOCKETING & SERVICE
BRANCH

Secretary of the Commission
Attn: Docketing and Service Branch
U.S. Nuclear Regulatory Commission
Washington, DC 20555

Dear Sir:

Thirteen years ago, I moved to Seabrook, New Hampshire. Being a city girl, born and raised in Boston, I felt as if I had moved to the end of the world. The sidewalks were folded up at 7:00pm; the only store within a ten mile radius was a Cumberland Farms and a small grocery chain. Seabrook didn't even have their own drug store.

Things have changed since then. I have watched as new industry moved in and expanded. Retail stores (such as Zayre's) and grocery chains (Demoula's and Market Basket) have popped up all over. Seabrook now has not one, but two drug stores. The population has tripled.

There is no longer enough power to support the growing influx of people. Unless Seabrook is allowed to go on line, there will be a terrible power shortage.

I'll admit, I am spoiled. I do not relish the thought of reading by candlelight, cooking over an open hearth or boiling water to take a bath. Without electricity, I'll be stepping back into the dark ages.

Due to his own aspirations, Governor Dukakis, has used Seabrook as a political volleyball. I guess it worked his name was in lights and now he's actually, running for "President".

As officials of nuclear power, you have the knowledge and the responsibility for the public's health and safety. I ask you not to allow anti-nuclear opponents or self serving politicians to stop your efforts in clarifying requirements for low power operations.

I urge the commission to proceed in a adopting the proposed rule change, clarifying the Emergency Planning Requirements for Low Power Licensing of new nuclear power stations.

Very truly yours,

Peggy Creighton
