OFFICE OF SECRETARY  
DOCKETING AND SERVICE  
BRANCH

Dear Sirs:

The Seabrook Nuclear Power Plant has been successfully tested and retested to the NRC's strictest criteria. Safety improvements have been made due to requests and recommendations from regulators and agencies, and will continue to be made to ensure the safest possible operation. Employees are subject to increasing scrutiny. The commercial Nuclear process has been and will continue to be a very safe form of fission and the cleanest form, environmentally speaking, to produce electricity. Surely anyone who examines the industries incident rate, extensive safety measures, and the to near future power demand, can competently issue a 5% and commercial power license to Seabrook Station. I only hope the decision is made before it is too late

Sincerely,

Bruce Tardiff  
 52 Old Dover Rd.  
 Rochester, N.H. 03867
