Dear Sir:

The Ohio State University Research Reactor license (License No. R-75 Docket No. 50-150) was amended January 15, 1976 by Amendment #7 to reduce the amount of U-235 to 4.6 Kilograms for use in connection with its operation. This reduction was the direct result of our removal and shipment of a fission plate assembly containing about 4.4 kilograms of U-235. When the amendment was approved, however, the original license allocation of up to 8.0 kilograms of U-235 was not deleted. This leaves a discrepancy in the current license. Section 2B allows 4.6 kilograms and Section 4 allows 8 kilograms of U-235. We propose that Section 4 be deleted.

Since this is an amendment request that is designed to correct a previous administrative error, there are no safety implications and therefore this proposed change does not constitute an unreviewed safety question.

If you have any questions on this request please contact Mr. Richard D. Myser at (614) 422-6755.

Sincerely,

Robert F. Redmond, Director

RFR/kjc

I hereby certify that the above was signed before me on May 5, 1986.
