Ladies/Gentleman:

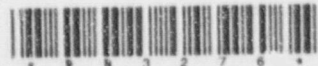

DOCKET 50-266 AND 50-301  
REVISED SCHEDULE FOR GENERIC LETTER 96-01  
TESTING OF SAFETY-RELATED LOGIC CIRCUITS  
POINT BEACH NUCLEAR PLANT, UNITS 1 AND 2

Generic Letter 96-01 requested licensees to take actions to ensure that their surveillance procedures adequately test safety-related equipment as required by the Technical Specifications. The requested actions are: (1) Compare electrical schematics and logic drawings against the plant surveillance test procedures to ensure that all portions of the logic circuitry is properly tested and (2) modify the surveillance procedures as necessary for complete testing to comply with the Technical Specifications. The requested schedule for completing these actions is prior to startup from the first refueling outage commencing one year after the issuance of Generic Letter 96-01.

Wisconsin Electric provided acknowledgment of the GL 96-01 actions in a letter dated April 17, 1996. In that letter we stated that the first refueling outages commencing one year after issuance of GL 96-01 were projected to commence at Point Beach Nuclear Plant on March 29, 1997 for Unit 1 (U1R24) and October 11, 1997 for Unit 2 (U2R23). Due to our extended U2R22 refueling and steam generator replacement outage, refueling outages U1R24 and U2R23 did not occur in 1997 as projected. Our next Unit 1 refueling outage (U1R24) is currently scheduled to commence during the first quarter of 1998. Our next Unit 2 refueling outage (U2R23) is currently scheduled to commence during the Fall 1998. Wisconsin Electric intends to complete GL 96-01 required actions prior to startup from planned 1998 refueling outages, U1R24 and U2R23, consistent with our original commitment.
