Re: Seabrook Nuclear Plant

Please consider immediately or as soon as possible the issuance of a license to operate the presently completed Seabrook Plant.

On the basis of past and present surveys indicating public need and requirements, plans and specifications, permits to build were issued by all necessary agencies. All recommendations and changes have been complied with.

While some few communities have not participated in evacuation plans it is their legal duty and responsibility to do so in the event of some remote emergency.

Utility companies have served their areas and our country very well for the past century. Their integrity has been well founded and the public confidence established and made their operations possible by people investing their hard earned dollars for income in our so called golden years.

Please don't let this opportunity pass to take affirmative action and issue a license.

Thank you for considering our suggestions.
P.S. From all that we have read about nuclear energy it is by far the safest.
Sincerely,
E.F. Baumann
