Docket Nos. 50-289-OLA-1 and 50-289-OLA-2
(Steam Generator Plugging Criteria)

Dear Administrative Judges:

For the information of the Licensing Board, I am enclosing a copy of Licensee's May 2, 1986 initial report to the Staff of the recent eddy current inspection at TMI-1.

Sincerely,

Bruce W. Churchill

Office of Nuclear Reactor Regulation
Attn: Mr. J. F. Stolz, Director
PWR Projects Directorate No. 6
U.S. Nuclear Regulatory Commission
Washington, DC 20555

Dear Mr. Stolz:

Three Mile Island Nuclear Station Unit 1 (TMI-1)
Operating License No. DPR-50
Docket No. 50-289
Post Eddy Current Inspection Report

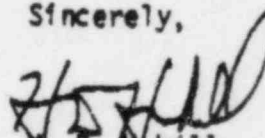

Following the completion of the Eddy Current Inspection of TMI-1 A and B steam generator tubes, Technical Inspection 4.19.5a requires a report to be submitted of the number of tubes repaired or removed from service.

During the SM eddy current outage, no tubes were repaired by the kinetic expansion process in either steam generator. A total of 25 tubes were removed from service by plugging; 10 tubes in Steam Generator A and 15 tubes in Steam Generator B. Of these, 5 tubes in Steam Generator A and 9 tubes in Steam Generator B had indications exceeding the repair limits of Technical Specification 4.19.4.a.6. The remaining tubes were plugged for conservatism based on engineering judgement. Tube plugging was completed on April 18, 1986.

A total of 1227 tubes have been removed from service since fabrication in Steam Generator A. In Steam Generator B, a total of 340 tubes have been removed from service.

This letter fulfills the requirement of Technical Specification 4.19.5a.

Sincerely,

H. D. McKill
Director, TMI-1
