Jones and Laughlin Steel Corporation
ATTN: Mr. A. A. Memmaralli, Jr.
Manager, Industrial Health
Engineering
3 Gateway Center
Pittsburg, Pennsylvania 15230

Gentlemen:

Enclosed is License No. 37-02567-05.

Your application indicates that relocation, removal, and reinstallation of devices will be performed by authorized Jones and Laughlin Steel Corporation personnel under the supervision of the radiation protection officer. In order to provide for this authority, we need to know the specific procedures for relocation, removal, and installation of devices including surveys which will be performed after reinstallation. We note in your application that you indicate that no instrumentation is required to possess or utilize these gauges. Accordingly, the license requires relocation, removal, and installation to be performed by Texas Nuclear Corporation. If you wish authority to perform these operations, specific procedures should be submitted including surveys which will be performed each time the device is removed from its place of use and reinstalled.

Sincerely,

Nathan Bassin
Materials Branch
Division of Materials and
Fuel Cycle Facility Licensing
