EXHIBIT 2B

1986 Information Collection Budget - Supporting Exhibit: New Information Collections Proposed in 1986

Nuclear Regulatory Commission

| <u>ICB Form No.</u> | <u>Title</u> | <u>9/86 Estimate</u> |
|---------------------|------------------|--------------------------|
| 1 | Station Blackout | 15,000 |

Abstract: The Nuclear Regulatory Commission is proposing to amend its regulations to require that light-water-cooled nuclear power plants be capable of withstanding a total loss of alternating current (AC) electric power called "station blackout" for a specified duration and to maintain reactor core cooling during that period. This proposed requirement is based on information developed under the Commission's study of Unresolved Safety Issue A-44, "Station Blackout." The proposed change would require licensees to provide information to NRC on their ability to cope with a station blackout.

| | | |
|---|---------------------------------|--------|
| 2 | Revised Process Control Program | 50,000 |
|---|---------------------------------|--------|

Abstract: A generic letter may be issued which will provide new guidance on "Process Control Programs" (PCP) for radwaste solidification. The generic letter would request, but not require, submission of PCPs revised to meet this new guidance.

| | | |
|---|---|----|
| 3 | Interim Requirements for Nonpower Reactors Possessing Category I and II Quantities of Materials | 30 |
|---|---|----|

Abstract: Staff is proposing to require notification and a description of the additional measures to be implemented at least 48 hours before a licensee is no longer exempt from certain physical protection requirements.

| <u>ICB Form No.</u> | <u>Title</u> | <u>9/86 Estimate</u> |
|---------------------|---|--------------------------|
| 4 | Improvement of Category II Physical Protection Requirements for HEU | 2,900 |

Abstract: In response to the Commission's direction to expeditiously improve security at nonpower reactors possessing Category II quantities of high enriched uranium, rulemaking is being proposed by staff. The amended regulations would require the licensee to submit a revised security plan describing the additional security measures to be implemented. Beyond this one-time submittal, no additional reporting is anticipated.

| | | |
|---|--|-------|
| 5 | Reporting Requirements for Safeguards Events | 5,220 |
|---|--|-------|

Abstract: The proposed rule would clarify the safeguards event reporting requirements for NRC licensees and would improve the NRC safeguards events data base by requiring more uniform safeguards events reports.

| | | |
|---|----------------------------------|--------|
| 6 | Insider Safeguards Rules Package | 81,990 |
|---|----------------------------------|--------|

Abstract: Three related proposed rulemaking actions to: 1) establish personnel screening requirements for power reactor licensee employees and contractors, 2) clarify the role of pat-down entry searches and 3) revise vital area designation and protection, access control to vital areas, and key and lock control.

| | | |
|---|---|----|
| 7 | Notification of Transient, Export and Import Shipments of Natural Uranium | 45 |
|---|---|----|

Abstract: Pursuant to the Convention on the Physical Protection of Nuclear Material, licensees will be required to provide advance notification and, in some cases, assurances of protection for transient, export and import shipments of natural uranium in amounts exceeding 500 kilograms.

| <u>ICB Form No.</u> | <u>Title</u> | <u>9/86 Estimate</u> |
|---------------------|--|--------------------------|
| 8 | Notification of Transient Shipments of Nuclear Material | 30 |

Abstract: Pursuant to the Convention on the Physical Protection of Nuclear Material, licensees will be required to provide advance notification and, in some cases, assurances of protection for transient shipments of formula quantities of strategic special nuclear material, special nuclear material of moderate and low strategic significance, and irradiated reactor fuel.

| | | |
|---|--|-----|
| 9 | Notification of Export and Import Shipments of Nuclear Material | 925 |
|---|--|-----|

Abstract: Pursuant to the Convention on the Physical Protection of Nuclear Material, licensees will be required to provide advance notification and, in some cases, assurances of protection for shipments of special nuclear material, special nuclear material of moderate and low strategic significance, and irradiated reactor fuel.

| | | |
|----|--|-------|
| 10 | Material Control and Accounting Requirements for Licensees Possessing Formula Quantities of Strategic Special Nuclear Material | 3,508 |
|----|--|-------|

Abstract: The proposed rulemaking would replace existing material control and accounting (MC&A) requirements for fuel cycle facilities, including reprocessing plants, that are authorized to possess and use formula quantities of strategic special nuclear material (SSNM). It would establish a performance oriented regulation that emphasizes timely detection of formula quantity SSNM losses and provides for more conclusive resolution of discrepancies than is currently achievable.

| <u>ICB Form No.</u> | <u>Title</u> | <u>9/86 Estimate</u> |
|---------------------|---|--------------------------|
| 11 | Emergency Preparedness for Fuel Cycle and Other Radioactive Materials Licensees | 22,000 |

Abstract: The proposed rule would require about 30 fuel cycle and other radioactive materials licensees to submit an emergency plan that would, among other actions, require the notification of local authorities in case of an accident and that the licensee recommend protective actions for the public. An additional 30 licensees would be required to submit an evaluation showing a plan is not necessary.

| | | |
|----|--|----|
| 12 | Acceptance Criteria for Emergency Core Cooling Systems for Light-Water Cooled Nuclear Power Plants | 48 |
|----|--|----|

Abstract: Section 50.46(a)(3)(ii) requires licensees/applicants to document significant changes or errors and to report the effect of the change/error to the Commission. The licensee/applicant is also required to include in the report a schedule for completing compliance actions and to notify NRC of proposed plans to bring plant design into compliance.

| | | |
|----|---|-------|
| 13 | Codes and Standards for Nuclear Power Plants | 3,517 |
|----|---|-------|

Abstract: The proposed rule would update the existing reference to the ASME Code and would thereby permit the use of improved methods for the construction and inservice inspection of nuclear power plant components.

| <u>ICB Form No.</u> | <u>Title</u> | <u>9/86 Estimate</u> |
|---------------------|--|--------------------------|
| 14 | Primary Reactor Containment Leakage Testing for Water-Cooled Power Reactors | 10,000 |

Abstract: Each licensee and each applicant for an operating license for a nuclear power plant must develop and submit to the NRC a plan acceptable to the NRC staff for implementing the provisions of Appendix J concerned with reactor containment leakage testing. This will allow the licensee and the NRC staff to agree on the final implementation schedule when the licensee must use the amended Appendix J and the technical specifications conforming to amended Appendix J in its entirety.

| | | |
|----|-------------------------|-----|
| 15 | Material Status Reports | 204 |
|----|-------------------------|-----|

Abstract: The NRC is proposing to amend its regulations in 10 CFR 70.53 to require affected licensees to report data summarizing the results of physical inventories of special nuclear material (SNM). Without a regulatory requirement for submittals, NRC would have to conduct inspections to acquire SNM physical inventory data. In conjunction with this rulemaking, NRC will modify the form that licensees use to include definitions of required data elements needed to report summaries of SNM physical inventory data.

|----|--|-------|
| 16 | Rule to Amend the Transportation Provisions Pertaining to the Shipment of Low Specific Activity (LSA) Material | 1,000 |
|----|--|-------|

Abstract: The proposed rule would reduce the paperwork burden associated with the shipment of low specific activity (LSA) material. Application of the NRC for approval of packaging for shipment of LSA material would no longer be required. The licensee must continue to substantiate in his own records that the LSA packaging meets the standards set and must continue to register with NRC his intended use of the general license offered in 10 CFR 71 for shipment of LSA material.

| 17 | Questionnaire on Current Makeup and Operations of the Nuclear Vendor Industry | 1,600 |

Abstract: The questionnaire will gather information on changes that are taking place in the nuclear vendor industry. Some companies have gone out of business while others have closed out their nuclear products division. This has caused a shift in the way products are procured by utilities. The information collected will be used to effectively plan for inspection activities of the nuclear vendor industry.

| 18 | Changes in Property Insurance Requirements for NRC Licensed Nuclear Power Plants | 48 |
|----|--|----|

Abstract: 10 CFR 50.54(w) is being changed to require increased levels of property insurance for decontamination after accidents at commercial reactors. Public utilities in three or four states may be prohibited by state law from buying the full amount of insurance required. The rule requires that the Attorney General of each state having such prohibitions affecting NRC licensees shall report to the NRC each year that, in fact, the law of his state prohibits certain utilities in his state from buying the full amount of insurance.
