TRIP REPORT - VISIT TO WPPSS 1 & 4 SITE

A visit was made to the proposed WPPSS 1 & 4 site on July 15, 1974, in conjunction with the Pebble Springs site visit. Since this visit preceded the environmental site visit (with the approval of the EPM), no environmental questions had been prepared for discussion with the applicant. The site review was conducted in the company of Sharon Engstrom of WPPSS and Dave Baker of Battelle-Northwest (consultant to the applicant). During the tour of the site, the relationship of proposed WPPSS 1 & 4 to WPPSS #2 (under construction) was noted, as well as the location of the future effluent discharge line on the Columbia River. Nearby residences and farms were visited on the opposite side of the river. It was noted through a conversation with an employee of the farm containing the nearest cow that eight children (including a 4 day-old infant) consumed the milk from the cow. The visit was concluded at approximately 4:00pm.
