Kate:

I wanted to pass along some additional information that has been generated by our NRC Region IV.

Don:

WCFO has researched this issue further and has confirmed that both facilities previously held specific licenses that were terminated prior to 1985. License No. 50-13478-01 was issued to Ketchikan Pulp Company, and License Nos.

50-11218-01 and 50-11218-02 were issued to Alaska Lumber and Pulp. These license nos. are identified in the listing published in association with the Oakridge terminated license review project; however, they were not identified for regional followup. WCFO also confirmed that Ketchikan Pulp Company subsequently acquired a Densart Model 3400 device under a general license in 1992. This device contained a cesium-137 source with a nominal activity of 80 mCi.

I hope this information is useful

Donald A. Cool

FRANK:

I got the attached from  
KATE COLEMAN. She asked me  
about the Ketchikan Pulp when  
I called her about my ALASKA  
inspections. I will be going  
to Ketchikan in August.
