REPORT OF INQUIRY

September 20, 1983

SUBJECT: COMANCHE PEAK STEAM ELECTRIC STATION:  
ALLEGED POOR MANAGEMENT PRACTICES

REPORT NUMBER: Q4-83-023

1. On September 16, 1983, [REDACTED] a former Brown & Root, Inc., electrician at Comanche Peak Steam Electric Station (CPSES), entered the Office of Investigation Field Office (OIFO), Region IV, and requested the opportunity to talk to an investigator. [REDACTED] was interviewed at the OIFO, Region IV, by NRC Investigator H. Brooks GRIFFITH [REDACTED] at which time he quit because he was "unhappy" with his job. [REDACTED] said his foreman was [REDACTED] and his general foreman was [REDACTED]
2. [REDACTED] stated that [REDACTED] hired pipefitter [REDACTED] (not further identified) as an electrician, and once realizing he [REDACTED] was not trained as an electrician, continued to employ him rather than admit their mistake. [REDACTED] said other electricians (not further identified) were made to perform [REDACTED] work. [REDACTED] said that [REDACTED] was hired in June 1983, and that [REDACTED] voluntarily terminated his employment with Brown & Root, Inc., in September 1983 (reason for [REDACTED] leaving unknown). [REDACTED] said that after [REDACTED] quit, he was assigned by [REDACTED] to re-work many of the jobs formerly performed by [REDACTED]. [REDACTED] said [REDACTED] placed a lot of pressure on him to complete this rework.
3. [REDACTED] complained that pressure was applied by [REDACTED] wherein he would not allow him to requisition material (not further identified) from the Fabric Shop, and that he [REDACTED] had to find various required materials laying around the site needed to complete those tasks. [REDACTED] said that [REDACTED] threatened to fire him on August 24, 1983, for "looking around" (scrounging) for materials, even though it was his [REDACTED] only source for material.
4. [REDACTED] also said that [REDACTED] would give him verbal instructions and would not give him [REDACTED] the documentation for work he was assigned to perform. [REDACTED] said he often had to ascertain the problems (not further identified) he was to receive from other workers assigned to the area. [REDACTED] said that [REDACTED] would not assist him (provide him with supervision), and regularly accused him of "screwing off" (wasting time). [REDACTED] said he did his work properly.
5. [REDACTED] said he did have a problem with 60 or 70 cable tray hangers (not further identified) on elevation #12 in the Safeguard Building which were not pre-assembled according to the instructions contained in the ECAI Design Change Authorization. [REDACTED] stated he could not recall the specific instructions that were violated in this DCA. [REDACTED] recalled having blueprint numbers 901-002, 901-003, and 901-004 (not further identified) for work on the 60 or 70 trays.

Billy Ray Jones

My name is Billy Ray Jones, and I have been employed by Brown & Root, the construction contractor at Comanche Peak, for about six and a half years. During 1979 I worked on Robert Messerly's crew installing hangars. I know that prior to that time Messerly had been in charge of the crew that handled Drillco "rebar eaters". During my employment with Brown & Root I have only had one occasion to use a rebar eater and that was to grind out a Hilti bolt that pulled out under torque.

I do not know of any instances where Drillco rebar eaters were used without proper engine documentation. I do not know of any instances where supervisors have instructed craft personnel to cut through rebar without proper documentation.

I have read the foregoing statement consisting of 1 handwritten/  
~~typed~~ page(s). I have made and initialed any necessary corrections and  
have signed my name in ink in the margin of each page. I swear that the  
foregoing statement is true and correct. Signed on 5-3-83 at 4:52.
